

DevFlow

"Engineering knowledge shouldn't leave with engineers."

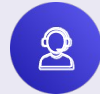

Every team has felt this. A key engineer exits — and weeks of context, decisions, and hard-won insight walk out the door with them.

DevFlow: AI Knowledge Capture for Engineering Teams

Departure Mode

AI analyzes git history and generates targeted exit interviews — capturing the *why* behind every decision before it's gone.

Onboarding Assistant

New engineers ask plain-language questions and get grounded, context-rich answers — not dead links.

Knowledge Map

Visualizes undocumented zones of the codebase so teams can identify and close knowledge gaps proactively.

Tech Stack

FastAPI

LangGraph

Vector DB

React

A fully agentic pipeline — from raw commit to conversational memory.

DevFlow in Action

LIVE SCENARIO

Startup loses a payments engineer.

New engineer asks: "**Why doesn't the webhook verification use Stripe's SDK?**"

DevFlow responds using:

- Exit interview answers
- Commit history
- PR discussions
- Code comments

Impact

Faster onboarding

New engineers ramp in days, not weeks.

Institutional memory preserved

Context survives every departure.

Detect knowledge gaps early

Map blind spots before they become incidents.
